Abstract. Sustainable development is a global aim to which Egypt is highly committed. This is evident in various projects and initiatives that aim to direct all activities towards more sustainable patterns and tools. Egyptian higher education institutions are an important partner and tool in enhancing sustainable development. University campuses, as the main anchors for higher education, take part in achieving this goal through developing green campuses that support the overall national sustainable development. This paper examines the presence of Egyptian universities in the global ranking of Green Campuses. It then focuses on two main case studies within the Egyptian context which are the AUC and ASU to compare their progress and identify their future priorities in Green Campus development.

Keywords

Sustainable development, Green Campus, Egyptian universities, University Rankings
